Karim Sharifullin

Software / Data Engineer | Backend, Payments & Data Pipelines

karimsha1801@gmail.com · Telegram @puker0n · linkedin.com/in/karim-sharifullin-aa947130a
Tbilisi, Georgia — Remote, B2B contractor via Georgian sole proprietorship (GMT+4)

Professional Summary

Software and data engineer with 4+ years in backend services, payments, ETL/ELT pipelines and data quality. On my own product and on contract work I own billing end to end: subscriptions, payment gateways, idempotent callbacks, refunds and charge ledgers, plus infrastructure and monitoring. At Alfa-Bank I build pipelines and built an LLM agent that cut incident investigation from 8 hours to 1 hour.

Key Skills

Backend & Payments: Python, FastAPI, Payment gateway integration (YooKassa, Prodamus, Telegram Stars), Recurring billing & subscriptions, Webhooks, PostgreSQL, SQLAlchemy, Redis, Celery, RunPod serverless GPU
Data & Reporting: SQL (advanced: window functions, query optimization), PySpark, Airflow, Kafka, ETL/ELT pipeline design, Data quality frameworks, Incident investigation & root-cause analysis, Power BI
Infrastructure, Monitoring & AI: Docker, nginx, GitHub Actions CI/CD, Prometheus, Grafana, LLM agents for automation
Familiar with: React, dbt, ClickHouse, Dagster, Apache Iceberg

Experience

YOS.math (own product) — Lead Developer August 2024 — Present
Remote

- Built and run yos-math.com end to end, an exam prep platform in 3 languages; main author (about 184 of 218 commits) in a team of 4, owning backend, frontend, bots, infrastructure and payments.
- Designed the billing system: Basic and Pro monthly subscriptions, YooKassa recurring auto-renewal, Prodamus and Telegram Stars, webhooks, renewals job and referral rewards.
- FastAPI, SQLAlchemy 2, Alembic, PostgreSQL, Redis, Celery; Docker Compose and nginx on DigitalOcean, GitHub Actions CI, Prometheus, Grafana and Uptime Kuma.

Contract project (under NDA) — Backend Engineer (contract) August 2026 — Present
Remote

- Took over and run in production a Telegram-based AI image and video generation SaaS; audited the inherited code and removed a backdoor before redeploy.
- Integrated a payment gateway: callback authorization, amount and currency verification, idempotent duplicate handling, credit reversal, polling fallback, minor units.
- Built a charge ledger (charge before queueing, automatic refund on failure) and 3-level referral payouts; partner CRM with per-bot revenue and payouts.
- Migrated GPU generation (ComfyUI) from rented Vast.ai GPUs to RunPod serverless; uptime monitoring with Telegram alerts.

Alfa-Bank — Data Engineer June 2024 — Present
Moscow (Hybrid)

- Build and maintain batch ETL/ELT pipelines (Python, PySpark, SQL, Airflow) for data scientists across 5 domain hubs.
- Built an LLM-agent system for data incident triage that cut average investigation time from 8 hours to 1 hour.
- Investigate data incidents end to end (duplicates, gaps, freshness, source reconciliation) and own the fix.
- Own the production data quality framework: drift detection, PSI tracking, anomaly checks and partition availability checks.

Stack: Python, PySpark, SQL, Airflow, Kafka, Cassandra, S3, Parquet, Delta Lake, Hive, Impala, Apache DataSketches

Council (own project) — Data / AI Engineer (side project) July 2026 — Present
Remote

- Built solo an end-to-end data and LLM platform: five LLM agents trade 45 stocks and crypto pairs on paper money; streaming via Redpanda into Iceberg and ClickHouse, dbt on Dagster, risk gate and ledger on PostgreSQL.

NurFinance — Data Analyst & Backend Developer July 2022 — May 2024
Kazan (Remote)

- Built financial dashboards in Power BI and DataLens tracking revenue, expenses and profitability.

Education & Certificates

Higher School of Economics — Computer Science and Data Analysis (Bachelor's, 2020–2024, Moscow)
